

Customize Switch with Module 26/09/2025

AIM:

To customized a cisco switch by adding or removing network modules with cisco packet tracer

PROCEDURE:

- open cisco packet tracer
- Add a Modular Switch
- Open a physical view & turn off the Switch
- Add a network module & power on the Switch for booting device
- connect two PC to the Switch PC0 & PC1 with a copper straight - through
- After connecting configure each pc's with their IPv4 address & subnet mask
- Test for connectivity from PC0 -> command Prompt -> ping 192.168.10.3 & verify o/p

Result:

Hence, the customized switch with module has been implemented successfully verified
