1. Network Topology (Final)

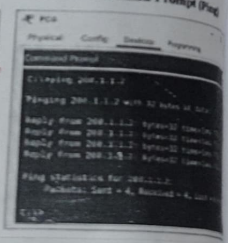

IP Configuration

3. Server IP Configuration

4. PC0 Command Prompt (Ping)

EXP 11

Examine Network Address Translation (NAT) using cisco packet Tracer

AIM:

To configure and examine NAT and verify communication between private network and public network

PROCEDURE:

- open cisco packet Tracer and add a router, Switch, PC and Server
- connect the device using appropriate cables
- configure IP address for the PC, router interface and server
- configure the router's inside and outside NAT interface
- create NAT configuration to Translate private IP address into public IP address
- ~~configure~~ the neccesary routing and NAT rules
- Test communication between the private network and public server using ping

5. Router CLI – Interface Configuration (Partial)

6. NAT Translation Table

7. NAT Statistics

- verify the translation and Statistics using show ip nat translations and show ip nat Statistics

RESULT:

NAT was configured and examined and communication between the private and Public Networks was tested
